

Predicate Calculus for Boolean Valued Functions.

Part XI

Shunichi Kobayashi
Ueda Multimedia Information Center
Nagano

Summary. In this paper, we proved some elementary predicate calculus formulae containing the quantifiers of Boolean valued functions with respect to partitions. Such a theory is an analogy of usual predicate logic.

The articles [5], [4], [7], [6], [3], [1], and [2] provide the notation and terminology for this paper.

For simplicity, we use the following convention: Y denotes a non empty set, a denotes an element of Boolean^Y , G denotes a subset of $\text{PARTITIONS}(Y)$, and A, B denote partitions of Y .

Next we state the proposition

(6)¹ If G is independent, then $\forall_{\exists_{a,A}G,B}G \in \forall_{\forall_{a,B}G,A}G$.
