The articles [1], [13], [2], [7], [8], [11], [5], [4], [12], [6], [9], [3], and [10] provide the notation and terminology for this paper.

We use the following convention: $C, P$ are simple closed curves and $a, b, c, d, e$ are points of $\mathcal{E}_{\mathrm{T}}^{2}$.

We now state several propositions:
(1) Let $n$ be a natural number, $a, p_{1}, p_{2}$ be points of $\mathcal{E}_{\mathrm{T}}^{n}$, and $P$ be a subset of $\mathcal{E}_{\mathrm{T}}^{n}$. Suppose $a \in P$ and $P$ is an arc from $p_{1}$ to $p_{2}$. Then there exists a map $f$ from $\mathbb{I}$ into $\left(\mathcal{E}_{\mathrm{T}}^{n}\right) \upharpoonright P$ and there exists a real number $r$ such that $f$ is a homeomorphism and $f(0)=p_{1}$ and $f(1)=p_{2}$ and $0 \leq r$ and $r \leq 1$ and $f(r)=a$.
(2) $\mathrm{W}_{\text {min }}(P) \leq_{P} \mathrm{E}_{\max }(P)$.
(3) If $a \leq_{P} \mathrm{E}_{\text {max }}(P)$, then $a \in \operatorname{UpperArc}(P)$.
(4) If $\mathrm{E}_{\max }(P) \leq_{P} a$, then $a \in \operatorname{Lower} \operatorname{Arc}(P)$.
(5) If $a \leq_{P} \mathrm{~W}_{\text {min }}(P)$, then $a \in \operatorname{LowerArc}(P)$.
(6) Let $P$ be a subset of $\mathcal{E}_{\mathrm{T}}^{2}$. Suppose $a \neq b$ and $P$ is an arc from $c$ to $d$ and LE $a, b, P, c, d$. Then there exists $e$ such that $a \neq e$ and $b \neq e$ and LE $a, e, P, c, d$ and LE $e, b, P, c, d$.
(7) If $a \in P$, then there exists $e$ such that $a \neq e$ and $a \leq_{P} e$.
(8) If $a \neq b$ and $a \leq_{P} b$, then there exists $c$ such that $c \neq a$ and $c \neq b$ and $a \leq_{P} c$ and $c \leq_{P} b$.

Let $P$ be a compact non empty subset of $\mathcal{E}_{\mathrm{T}}^{2}$ and let $a, b, c, d$ be points of $\mathcal{E}_{\mathrm{T}}^{2}$. We say that $a, b$, $c, d$ are in this order on $P$ if and only if:
(Def. 1) $\quad a \leq_{P} b$ and $b \leq_{P} c$ and $c \leq_{P} d$ or $b \leq_{P} c$ and $c \leq_{P} d$ and $d \leq_{P} a$ or $c \leq_{P} d$ and $d \leq_{P} a$ and $a \leq_{P} b$ or $d \leq_{P} a$ and $a \leq_{P} b$ and $b \leq_{P} c$.

One can prove the following propositions:
(9) If $a \in P$, then $a, a, a, a$ are in this order on $P$.
(10) If $a, b, c, d$ are in this order on $P$, then $b, c, d, a$ are in this order on $P$.

[^0](11) If $a, b, c, d$ are in this order on $P$, then $c, d, a, b$ are in this order on $P$.
(12) If $a, b, c, d$ are in this order on $P$, then $d, a, b, c$ are in this order on $P$.
(13) Suppose $a \neq b$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq a$ and $e \neq b$ and $a, e, b, c$ are in this order on $P$.
(14) Suppose $a \neq b$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq a$ and $e \neq b$ and $a, e, b, d$ are in this order on $P$.
(15) Suppose $b \neq c$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq b$ and $e \neq c$ and $a, b, e, c$ are in this order on $P$.
(16) Suppose $b \neq c$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq b$ and $e \neq c$ and $b, e, c, d$ are in this order on $P$.
(17) Suppose $c \neq d$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq c$ and $e \neq d$ and $a, c, e, d$ are in this order on $P$.
(18) Suppose $c \neq d$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq c$ and $e \neq d$ and $b, c, e, d$ are in this order on $P$.
(19) Suppose $d \neq a$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq d$ and $e \neq a$ and $a, b, d, e$ are in this order on $P$.
(20) Suppose $d \neq a$ and $a, b, c, d$ are in this order on $P$. Then there exists $e$ such that $e \neq d$ and $e \neq a$ and $a, c, d, e$ are in this order on $P$.
(21) Suppose $a \neq c$ and $a \neq d$ and $b \neq d$ and $a, b, c, d$ are in this order on $P$ and $b, a, c, d$ are in this order on $P$. Then $a=b$.
(22) Suppose $a \neq b$ and $b \neq c$ and $c \neq d$ and $a, b, c, d$ are in this order on $P$ and $c, b, a, d$ are in this order on $P$. Then $a=c$.
(23) Suppose $a \neq b$ and $a \neq c$ and $b \neq d$ and $a, b, c, d$ are in this order on $P$ and $d, b, c, a$ are in this order on $P$. Then $a=d$.
(24) Suppose $a \neq c$ and $a \neq d$ and $b \neq d$ and $a, b, c, d$ are in this order on $P$ and $a, c, b, d$ are in this order on $P$. Then $b=c$.
(25) Suppose $a \neq b$ and $b \neq c$ and $c \neq d$ and $a, b, c, d$ are in this order on $P$ and $a, d, c, b$ are in this order on $P$. Then $b=d$.
(26) Suppose $a \neq b$ and $a \neq c$ and $b \neq d$ and $a, b, c, d$ are in this order on $P$ and $a, b, d, c$ are in this order on $P$. Then $c=d$.
(27) Suppose $a \in C$ and $b \in C$ and $c \in C$ and $d \in C$. Then
(i) $a, b, c, d$ are in this order on $C$, or
(ii) $a, b, d, c$ are in this order on $C$, or
(iii) $a, c, b, d$ are in this order on $C$, or
(iv) $a, c, d, b$ are in this order on $C$, or
(v) $a, d, b, c$ are in this order on $C$, or
(vi) $a, d, c, b$ are in this order on $C$.
