# The Limit of a Real Function at Infinity 

Jarosław Kotowicz<br>Warsaw University<br>Białystok

#### Abstract

Summary. We introduced the halflines (open and closed), real sequences divergent to infinity (plus and minus) and the proper and improper limit of a real function at infinty. We prove basic properties of halflines, sequences divergent to infinity and the limit of function at infinity.

The articles [11], [14], [1], [12], [2], [9], [5], [3], [4], [8], [15], [13], [6], [10], and [7] provide the notation and terminology for this paper.

For simplicity, we follow the rules: $r_{1}, r_{2}, g_{1}, g_{2}$ denote real numbers, $n, m, k$ denote natural numbers, $s_{1}, s_{2}, s_{3}$ denote sequences of real numbers, and $f, f_{1}, f_{2}$ denote partial functions from $\mathbb{R}$ to $\mathbb{R}$.

Let us consider $n, m$. Then $\max (n, m)$ is a natural number.
We now state the proposition
(1) If $0 \leq r_{1}$ and $r_{1}<r_{2}$ and $0<g_{1}$ and $g_{1} \leq g_{2}$, then $r_{1} \cdot g_{1}<r_{2} \cdot g_{2}$.

Let $r$ be a real number. We introduce $]-\infty, r$ as a synonym of $\mathrm{HL}(r)$.
In the sequel $r, r_{1}, r_{2}, g, g_{1}$ denote real numbers.
Let $r$ be a real number. The functor $]-\infty, r]$ yielding a subset of $\mathbb{R}$ is defined as follows:
(Def. 1) $\quad]-\infty, r]=\{g: g \leq r\}$.
The functor $[r,+\infty[$ yields a subset of $\mathbb{R}$ and is defined as follows:
(Def. 2) $\quad[r,+\infty[=\{g: r \leq g\}$.
The functor $] r,+\infty[$ yields a subset of $\mathbb{R}$ and is defined as follows:
(Def. 3) $\quad] r,+\infty[=\{g: r<g\}$.
One can prove the following propositions:
$(8)^{1}$ If $r_{1} \leq r_{2}$, then $] r_{2},+\infty[\subseteq] r_{1},+\infty[$.
(9) If $r_{1} \leq r_{2}$, then $\left[r_{2},+\infty\left[\subseteq\left[r_{1},+\infty[\right.\right.\right.$.
(10) $] r,+\infty[\subseteq[r,+\infty[$.
(11) $] r, g[\subseteq] r,+\infty[$.

[^0](12) $\quad[r, g] \subseteq[r,+\infty[$.
(13) If $r_{1} \leq r_{2}$, then $]-\infty, r_{1}[\subseteq]-\infty, r_{2}[$.
(14) If $r_{1} \leq r_{2}$, then $\left.\left.\left.]-\infty, r_{1}\right] \subseteq\right]-\infty, r_{2}\right]$.
(15) $]-\infty, r[\subseteq]-\infty, r]$.
(16) $] g, r[\subseteq]-\infty, r[$.
(17) $[g, r] \subseteq]-\infty, r]$.
(18) $]-\infty, r[\cap] g,+\infty[=] g, r[$.
(19) $]-\infty, r] \cap[g,+\infty[=[g, r]$.
(20) If $r \leq r_{1}$, then $] r_{1}, r_{2}[\subseteq] r,+\infty\left[\right.$ and $\left[r_{1}, r_{2}\right] \subseteq[r,+\infty[$.
(21) If $r<r_{1}$, then $\left.\left[r_{1}, r_{2}\right] \subseteq\right] r,+\infty[$.
(22) If $r_{2} \leq r$, then $] r_{1}, r_{2}[\subseteq]-\infty, r\left[\right.$ and $\left.\left.\left[r_{1}, r_{2}\right] \subseteq\right]-\infty, r\right]$.
(23) If $r_{2}<r$, then $\left.\left[r_{1}, r_{2}\right] \subseteq\right]-\infty, r[$.
(24) $\mathbb{R} \backslash] r,+\infty[=]-\infty, r]$ and $\mathbb{R} \backslash[r,+\infty[=]-\infty, r[$ and $\mathbb{R} \backslash]-\infty, r[=[r,+\infty[$ and $\mathbb{R} \backslash]-\infty, r]=$ $] r,+\infty[$.
(25) $\left.\mathbb{R} \backslash] r_{1}, r_{2}[=]-\infty, r_{1}\right] \cup\left[r_{2},+\infty\left[\right.\right.$ and $\left.\mathbb{R} \backslash\left[r_{1}, r_{2}\right]=\right]-\infty, r_{1}[\cup] r_{2},+\infty[$.
(26) If $s_{1}$ is non-decreasing, then $s_{1}$ is lower bounded and if $s_{1}$ is non-increasing, then $s_{1}$ is upper bounded.
(27) If $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and $s_{1}$ is non-decreasing, then for every $n$ holds $s_{1}(n)<0$.
(28) If $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and $s_{1}$ is non-increasing, then for every $n$ holds $0<s_{1}(n)$.
(29) If $s_{1}$ is convergent and $0<\lim s_{1}$, then there exists $n$ such that for every $m$ such that $n \leq m$ holds $0<s_{1}(m)$.
(30) If $s_{1}$ is convergent and $0<\lim s_{1}$, then there exists $n$ such that for every $m$ such that $n \leq m$ holds $\frac{\lim s_{1}}{2}<s_{1}(m)$.

Let us consider $s_{1}$. We say that $s_{1}$ is divergent to $+\infty$ if and only if:
(Def. 4) For every $r$ there exists $n$ such that for every $m$ such that $n \leq m$ holds $r<s_{1}(m)$.
We say that $s_{1}$ is divergent to $-\infty$ if and only if:
(Def. 5) For every $r$ there exists $n$ such that for every $m$ such that $n \leq m$ holds $s_{1}(m)<r$.
The following propositions are true:
(33) Suppose $s_{1}$ is divergent to $+\infty$ and divergent to $-\infty$. Then there exists $n$ such that for every $m$ such that $n \leq m$ holds $s_{1} \uparrow m$ is non-zero.
(34)(i) If $s_{1} \uparrow k$ is divergent to $+\infty$, then $s_{1}$ is divergent to $+\infty$, and
(ii) if $s_{1} \uparrow k$ is divergent to $-\infty$, then $s_{1}$ is divergent to $-\infty$.
(35) If $s_{2}$ is divergent to $+\infty$ and $s_{3}$ is divergent to $+\infty$, then $s_{2}+s_{3}$ is divergent to $+\infty$.
(36) If $s_{2}$ is divergent to $+\infty$ and $s_{3}$ is lower bounded, then $s_{2}+s_{3}$ is divergent to $+\infty$.

[^1](37) If $s_{2}$ is divergent to $+\infty$ and $s_{3}$ is divergent to $+\infty$, then $s_{2} s_{3}$ is divergent to $+\infty$.
(38) If $s_{2}$ is divergent to $-\infty$ and $s_{3}$ is divergent to $-\infty$, then $s_{2}+s_{3}$ is divergent to $-\infty$.
(39) If $s_{2}$ is divergent to $-\infty$ and $s_{3}$ is upper bounded, then $s_{2}+s_{3}$ is divergent to $-\infty$.
(40)(i) If $s_{1}$ is divergent to $+\infty$ and $r>0$, then $r s_{1}$ is divergent to $+\infty$,
(ii) if $s_{1}$ is divergent to $+\infty$ and $r<0$, then $r s_{1}$ is divergent to $-\infty$, and
(iii) if $s_{1}$ is divergent to $+\infty$ and $r=0$, then $\operatorname{rng}\left(r s_{1}\right)=\{0\}$ and $r s_{1}$ is constant.
(41)(i) If $s_{1}$ is divergent to $-\infty$ and $r>0$, then $r s_{1}$ is divergent to $-\infty$,
(ii) if $s_{1}$ is divergent to $-\infty$ and $r<0$, then $r s_{1}$ is divergent to $+\infty$, and
(iii) if $s_{1}$ is divergent to $-\infty$ and $r=0$, then $\operatorname{rng}\left(r s_{1}\right)=\{0\}$ and $r s_{1}$ is constant.
(42)(i) If $s_{1}$ is divergent to $+\infty$, then $-s_{1}$ is divergent to $-\infty$, and
(ii) if $s_{1}$ is divergent to $-\infty$, then $-s_{1}$ is divergent to $+\infty$.
(43) If $s_{1}$ is lower bounded and $s_{2}$ is divergent to $-\infty$, then $s_{1}-s_{2}$ is divergent to $+\infty$.
(44) If $s_{1}$ is upper bounded and $s_{2}$ is divergent to $+\infty$, then $s_{1}-s_{2}$ is divergent to $-\infty$.
(45) If $s_{1}$ is divergent to $+\infty$ and $s_{2}$ is convergent, then $s_{1}+s_{2}$ is divergent to $+\infty$.
(46) If $s_{1}$ is divergent to $-\infty$ and $s_{2}$ is convergent, then $s_{1}+s_{2}$ is divergent to $-\infty$.
(47) If for every $n$ holds $s_{1}(n)=n$, then $s_{1}$ is divergent to $+\infty$.
(48) If for every $n$ holds $s_{1}(n)=-n$, then $s_{1}$ is divergent to $-\infty$.
(49) If $s_{2}$ is divergent to $+\infty$ and there exists $r$ such that $r>0$ and for every $n$ holds $s_{3}(n) \geq r$, then $s_{2} s_{3}$ is divergent to $+\infty$.
(50) If $s_{2}$ is divergent to $-\infty$ and there exists $r$ such that $0<r$ and for every $n$ holds $s_{3}(n) \geq r$, then $s_{2} s_{3}$ is divergent to $-\infty$.
(51) If $s_{2}$ is divergent to $-\infty$ and $s_{3}$ is divergent to $-\infty$, then $s_{2} s_{3}$ is divergent to $+\infty$.
(52) If $s_{1}$ is divergent to $+\infty$ and divergent to $-\infty$, then $\left|s_{1}\right|$ is divergent to $+\infty$.
(53) If $s_{1}$ is divergent to $+\infty$ and $s_{2}$ is a subsequence of $s_{1}$, then $s_{2}$ is divergent to $+\infty$.
(54) If $s_{1}$ is divergent to $-\infty$ and $s_{2}$ is a subsequence of $s_{1}$, then $s_{2}$ is divergent to $-\infty$.
(55) If $s_{2}$ is divergent to $+\infty$ and $s_{3}$ is convergent and $0<\lim s_{3}$, then $s_{2} s_{3}$ is divergent to $+\infty$.
(56) If $s_{1}$ is non-decreasing and $s_{1}$ is not upper bounded, then $s_{1}$ is divergent to $+\infty$.
(57) If $s_{1}$ is non-increasing and $s_{1}$ is not lower bounded, then $s_{1}$ is divergent to $-\infty$.
(58) If $s_{1}$ is increasing and $s_{1}$ is not upper bounded, then $s_{1}$ is divergent to $+\infty$.
(59) If $s_{1}$ is decreasing and $s_{1}$ is not lower bounded, then $s_{1}$ is divergent to $-\infty$.
(60) If $s_{1}$ is monotone, then $s_{1}$ is convergent, divergent to $+\infty$, and divergent to $-\infty$.
(61) If $s_{1}$ is divergent to $+\infty$ and divergent to $-\infty$, then $s_{1}^{-1}$ is convergent and $\lim \left(s_{1}{ }^{-1}\right)=0$.
(62) Suppose $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and there exists $k$ such that for every $n$ such that $k \leq n$ holds $0<s_{1}(n)$. Then $s_{1}^{-1}$ is divergent to $+\infty$.
(63) Suppose $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and there exists $k$ such that for every $n$ such that $k \leq n$ holds $s_{1}(n)<0$. Then $s_{1}{ }^{-1}$ is divergent to $-\infty$.
(64) If $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and $s_{1}$ is non-decreasing, then $s_{1}{ }^{-1}$ is divergent to $-\infty$.
(65) If $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and $s_{1}$ is non-increasing, then $s_{1}^{-1}$ is divergent to $+\infty$.
(66) If $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and $s_{1}$ is increasing, then $s_{1}^{-1}$ is divergent to $-\infty$.
(67) If $s_{1}$ is non-zero and convergent and $\lim s_{1}=0$ and $s_{1}$ is decreasing, then $s_{1}^{-1}$ is divergent to $+\infty$.
(68) Suppose $s_{2}$ is bounded and $s_{3}$ is divergent to $+\infty$, divergent to $-\infty$, and non-zero. Then $s_{2} / s_{3}$ is convergent and $\lim \left(s_{2} / s_{3}\right)=0$.
(69) If $s_{1}$ is divergent to $+\infty$ and for every $n$ holds $s_{1}(n) \leq s_{2}(n)$, then $s_{2}$ is divergent to $+\infty$.
(70) If $s_{1}$ is divergent to $-\infty$ and for every $n$ holds $s_{2}(n) \leq s_{1}(n)$, then $s_{2}$ is divergent to $-\infty$.

Let us consider $f$. We say that $f$ is convergent in $+\infty$ if and only if the conditions (Def. 6) are satisfied.
(Def. 6)(i) For every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$, and
(ii) there exists $g$ such that for every $s_{1}$ such that $s_{1}$ is divergent to $+\infty$ and $\operatorname{rng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is convergent and $\lim \left(f \cdot s_{1}\right)=g$.

We say that $f$ is divergent in $+\infty$ to $+\infty$ if and only if the conditions (Def. 7) are satisfied.
(Def. 7)(i) For every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$, and
(ii) for every $s_{1}$ such that $s_{1}$ is divergent to $+\infty$ and $\operatorname{nng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is divergent to $+\infty$.

We say that $f$ is divergent in $+\infty$ to $-\infty$ if and only if the conditions (Def. 8) are satisfied.
(Def. 8)(i) For every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$, and
(ii) for every $s_{1}$ such that $s_{1}$ is divergent to $+\infty$ and $\operatorname{rng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is divergent to $-\infty$.

We say that $f$ is convergent in $-\infty$ if and only if the conditions (Def. 9) are satisfied.
(Def. 9)(i) For every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$, and
(ii) there exists $g$ such that for every $s_{1}$ such that $s_{1}$ is divergent to $-\infty$ and $\operatorname{rng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is convergent and $\lim \left(f \cdot s_{1}\right)=g$.

We say that $f$ is divergent in $-\infty$ to $+\infty$ if and only if the conditions (Def. 10) are satisfied.
(Def. 10)(i) For every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$, and
(ii) for every $s_{1}$ such that $s_{1}$ is divergent to $-\infty$ and $\operatorname{rng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is divergent to $+\infty$.

We say that $f$ is divergent in $-\infty$ to $-\infty$ if and only if the conditions (Def. 11) are satisfied.
(Def. 11)(i) For every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$, and
(ii) for every $s_{1}$ such that $s_{1}$ is divergent to $-\infty$ and $\operatorname{rng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is divergent to $-\infty$.

Next we state a number of propositions:
$(77)^{3} f$ is convergent in $+\infty$ if and only if the following conditions are satisfied:
(i) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$, and
(ii) there exists $g$ such that for every $g_{1}$ such that $0<g_{1}$ there exists $r$ such that for every $r_{1}$ such that $r<r_{1}$ and $r_{1} \in \operatorname{dom} f$ holds $\left|f\left(r_{1}\right)-g\right|<g_{1}$.
(78) $f$ is convergent in $-\infty$ if and only if the following conditions are satisfied:
(i) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$, and
(ii) there exists $g$ such that for every $g_{1}$ such that $0<g_{1}$ there exists $r$ such that for every $r_{1}$ such that $r_{1}<r$ and $r_{1} \in \operatorname{dom} f$ holds $\left|f\left(r_{1}\right)-g\right|<g_{1}$.
(79) $f$ is divergent in $+\infty$ to $+\infty$ if and only if for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$ and for every $g$ there exists $r$ such that for every $r_{1}$ such that $r<r_{1}$ and $r_{1} \in \operatorname{dom} f$ holds $g<f\left(r_{1}\right)$.
(80) $f$ is divergent in $+\infty$ to $-\infty$ if and only if for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$ and for every $g$ there exists $r$ such that for every $r_{1}$ such that $r<r_{1}$ and $r_{1} \in \operatorname{dom} f$ holds $f\left(r_{1}\right)<g$.
(81) $f$ is divergent in $-\infty$ to $+\infty$ if and only if for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$ and for every $g$ there exists $r$ such that for every $r_{1}$ such that $r_{1}<r$ and $r_{1} \in \operatorname{dom} f$ holds $g<f\left(r_{1}\right)$.
(82) $f$ is divergent in $-\infty$ to $-\infty$ if and only if for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$ and for every $g$ there exists $r$ such that for every $r_{1}$ such that $r_{1}<r$ and $r_{1} \in \operatorname{dom} f$ holds $f\left(r_{1}\right)<g$.
(83) Suppose that
(i) $f_{1}$ is divergent in $+\infty$ to $+\infty$,
(ii) $f_{2}$ is divergent in $+\infty$ to $+\infty$, and
(iii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f_{1} \cap \operatorname{dom} f_{2}$.

Then $f_{1}+f_{2}$ is divergent in $+\infty$ to $+\infty$ and $f_{1} f_{2}$ is divergent in $+\infty$ to $+\infty$.
(84) Suppose that
(i) $f_{1}$ is divergent in $+\infty$ to $-\infty$,
(ii) $f_{2}$ is divergent in $+\infty$ to $-\infty$, and
(iii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f_{1} \cap \operatorname{dom} f_{2}$.

Then $f_{1}+f_{2}$ is divergent in $+\infty$ to $-\infty$ and $f_{1} f_{2}$ is divergent in $+\infty$ to $+\infty$.
(85) Suppose that
(i) $f_{1}$ is divergent in $-\infty$ to $+\infty$,
(ii) $f_{2}$ is divergent in $-\infty$ to $+\infty$, and
(iii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f_{1} \cap \operatorname{dom} f_{2}$.

Then $f_{1}+f_{2}$ is divergent in $-\infty$ to $+\infty$ and $f_{1} f_{2}$ is divergent in $-\infty$ to $+\infty$.
(86) Suppose that
(i) $f_{1}$ is divergent in $-\infty$ to $-\infty$,
(ii) $f_{2}$ is divergent in $-\infty$ to $-\infty$, and
(iii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f_{1} \cap \operatorname{dom} f_{2}$.

Then $f_{1}+f_{2}$ is divergent in $-\infty$ to $-\infty$ and $f_{1} f_{2}$ is divergent in $-\infty$ to $+\infty$.

[^2](87) Suppose that
(i) $f_{1}$ is divergent in $+\infty$ to $+\infty$,
(ii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom}\left(f_{1}+f_{2}\right)$, and
(iii) there exists $r$ such that $f_{2}$ is lower bounded on $] r,+\infty[$.

Then $f_{1}+f_{2}$ is divergent in $+\infty$ to $+\infty$.
(88) Suppose that
(i) $f_{1}$ is divergent in $+\infty$ to $+\infty$,
(ii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom}\left(f_{1} f_{2}\right)$, and
(iii) there exist $r, r_{1}$ such that $0<r$ and for every $g$ such that $\left.g \in \operatorname{dom} f_{2} \cap\right] r_{1},+\infty[$ holds $r \leq f_{2}(g)$.
Then $f_{1} f_{2}$ is divergent in $+\infty$ to $+\infty$.
(89) Suppose that
(i) $\quad f_{1}$ is divergent in $-\infty$ to $+\infty$,
(ii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom}\left(f_{1}+f_{2}\right)$, and
(iii) there exists $r$ such that $f_{2}$ is lower bounded on $]-\infty, r[$.

Then $f_{1}+f_{2}$ is divergent in $-\infty$ to $+\infty$.
(90) Suppose that
(i) $f_{1}$ is divergent in $-\infty$ to $+\infty$,
(ii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom}\left(f_{1} f_{2}\right)$, and
(iii) there exist $r, r_{1}$ such that $0<r$ and for every $g$ such that $\left.g \in \operatorname{dom} f_{2} \cap\right]-\infty, r_{1}[$ holds $r \leq f_{2}(g)$.
Then $f_{1} f_{2}$ is divergent in $-\infty$ to $+\infty$.
(91)(i) If $f$ is divergent in $+\infty$ to $+\infty$ and $r>0$, then $r f$ is divergent in $+\infty$ to $+\infty$,
(ii) if $f$ is divergent in $+\infty$ to $+\infty$ and $r<0$, then $r f$ is divergent in $+\infty$ to $-\infty$,
(iii) if $f$ is divergent in $+\infty$ to $-\infty$ and $r>0$, then $r f$ is divergent in $+\infty$ to $-\infty$, and
(iv) if $f$ is divergent in $+\infty$ to $-\infty$ and $r<0$, then $r f$ is divergent in $+\infty$ to $+\infty$.
(92)(i) If $f$ is divergent in $-\infty$ to $+\infty$ and $r>0$, then $r f$ is divergent in $-\infty$ to $+\infty$,
(ii) if $f$ is divergent in $-\infty$ to $+\infty$ and $r<0$, then $r f$ is divergent in $-\infty$ to $-\infty$,
(iii) if $f$ is divergent in $-\infty$ to $-\infty$ and $r>0$, then $r f$ is divergent in $-\infty$ to $-\infty$, and
(iv) if $f$ is divergent in $-\infty$ to $-\infty$ and $r<0$, then $r f$ is divergent in $-\infty$ to $+\infty$.
(93) Suppose $f$ is divergent in $+\infty$ to $+\infty$ and divergent in $+\infty$ to $-\infty$. Then $|f|$ is divergent in $+\infty$ to $+\infty$.
(94) Suppose $f$ is divergent in $-\infty$ to $+\infty$ and divergent in $-\infty$ to $-\infty$. Then $|f|$ is divergent in $-\infty$ to $+\infty$.
(95) Suppose there exists $r$ such that $f$ is non-decreasing on $] r,+\infty[$ and $f$ is not upper bounded on $] r,+\infty[$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $+\infty$ to $+\infty$.
(96) Suppose there exists $r$ such that $f$ is increasing on $] r,+\infty[$ and $f$ is not upper bounded on $] r,+\infty[$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $+\infty$ to $+\infty$.
(97) Suppose there exists $r$ such that $f$ is non increasing on $] r,+\infty[$ and $f$ is not lower bounded on $] r,+\infty[$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $+\infty$ to $-\infty$.
(98) Suppose there exists $r$ such that $f$ is decreasing on $] r,+\infty[$ and $f$ is not lower bounded on $] r,+\infty[$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $+\infty$ to $-\infty$.
(99) Suppose there exists $r$ such that $f$ is non increasing on $]-\infty, r$ and $f$ is not upper bounded on $]-\infty, r$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $-\infty$ to $+\infty$.
(100) Suppose there exists $r$ such that $f$ is decreasing on $]-\infty, r[$ and $f$ is not upper bounded on $]-\infty, r[$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $-\infty$ to $+\infty$.
(101) Suppose there exists $r$ such that $f$ is non-decreasing on $]-\infty, r$ and $f$ is not lower bounded on $]-\infty, r$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $-\infty$ to $-\infty$.
(102) Suppose there exists $r$ such that $f$ is increasing on $]-\infty, r[$ and $f$ is not lower bounded on $]-\infty, r[$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$. Then $f$ is divergent in $-\infty$ to $-\infty$.

## (103) Suppose that

(i) $f_{1}$ is divergent in $+\infty$ to $+\infty$,
(ii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$, and
(iii) there exists $r$ such that $\operatorname{dom} f \cap] r,+\infty\left[\subseteq \operatorname{dom} f_{1} \cap\right] r,+\infty[$ and for every $g$ such that $g \in$ $\operatorname{dom} f \cap] r,+\infty\left[\right.$ holds $f_{1}(g) \leq f(g)$.
Then $f$ is divergent in $+\infty$ to $+\infty$.
(104) Suppose that
(i) $f_{1}$ is divergent in $+\infty$ to $-\infty$,
(ii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$, and
(iii) there exists $r$ such that $\operatorname{dom} f \cap] r,+\infty\left[\subseteq \operatorname{dom} f_{1} \cap\right] r,+\infty[$ and for every $g$ such that $g \in$ $\operatorname{dom} f \cap] r,+\infty\left[\right.$ holds $f(g) \leq f_{1}(g)$.
Then $f$ is divergent in $+\infty$ to $-\infty$.
(105) Suppose that
(i) $f_{1}$ is divergent in $-\infty$ to $+\infty$,
(ii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$, and
(iii) there exists $r$ such that $\operatorname{dom} f \cap]-\infty, r\left[\subseteq \operatorname{dom} f_{1} \cap\right]-\infty, r[$ and for every $g$ such that $g \in$ $\operatorname{dom} f \cap]-\infty, r\left[\right.$ holds $f_{1}(g) \leq f(g)$.
Then $f$ is divergent in $-\infty$ to $+\infty$.
(106) Suppose that
(i) $f_{1}$ is divergent in $-\infty$ to $-\infty$,
(ii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$, and
(iii) there exists $r$ such that $\operatorname{dom} f \cap]-\infty, r\left[\subseteq \operatorname{dom} f_{1} \cap\right]-\infty, r[$ and for every $g$ such that $g \in$ $\operatorname{dom} f \cap]-\infty, r\left[\right.$ holds $f(g) \leq f_{1}(g)$.
Then $f$ is divergent in $-\infty$ to $-\infty$.
(107) Suppose $f_{1}$ is divergent in $+\infty$ to $+\infty$ and there exists $r$ such that $] r,+\infty\left[\subseteq \operatorname{dom} f \cap \operatorname{dom} f_{1}\right.$ and for every $g$ such that $g \in] r,+\infty\left[\right.$ holds $f_{1}(g) \leq f(g)$. Then $f$ is divergent in $+\infty$ to $+\infty$.
(108) Suppose $f_{1}$ is divergent in $+\infty$ to $-\infty$ and there exists $r$ such that $] r,+\infty\left[\subseteq \operatorname{dom} f \cap \operatorname{dom} f_{1}\right.$ and for every $g$ such that $g \in] r,+\infty\left[\right.$ holds $f(g) \leq f_{1}(g)$. Then $f$ is divergent in $+\infty$ to $-\infty$.
(109) Suppose $f_{1}$ is divergent in $-\infty$ to $+\infty$ and there exists $r$ such that $]-\infty, r\left[\subseteq \operatorname{dom} f \cap \operatorname{dom} f_{1}\right.$ and for every $g$ such that $g \in]-\infty, r$ holds $f_{1}(g) \leq f(g)$. Then $f$ is divergent in $-\infty$ to $+\infty$.
(110) Suppose $f_{1}$ is divergent in $-\infty$ to $-\infty$ and there exists $r$ such that $]-\infty, r\left[\subseteq \operatorname{dom} f \cap \operatorname{dom} f_{1}\right.$ and for every $g$ such that $g \in]-\infty, r\left[\right.$ holds $f(g) \leq f_{1}(g)$. Then $f$ is divergent in $-\infty$ to $-\infty$.

Let us consider $f$. Let us assume that $f$ is convergent in $+\infty$. The functor $\lim _{+\infty} f$ yields a real number and is defined by:
(Def. 12) For every $s_{1}$ such that $s_{1}$ is divergent to $+\infty$ and $\operatorname{rng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is convergent and $\lim \left(f \cdot s_{1}\right)=\lim _{+\infty} f$.

Let us consider $f$. Let us assume that $f$ is convergent in $-\infty$. The functor $\lim _{-\infty} f$ yields a real number and is defined by:
(Def. 13) For every $s_{1}$ such that $s_{1}$ is divergent to $-\infty$ and $\operatorname{rng} s_{1} \subseteq \operatorname{dom} f$ holds $f \cdot s_{1}$ is convergent and $\lim \left(f \cdot s_{1}\right)=\lim _{-\infty} f$.

We now state a number of propositions:
(113 $]^{4}$ Suppose $f$ is convergent in $-\infty$. Then $\lim _{-\infty} f=g$ if and only if for every $g_{1}$ such that $0<$ $g_{1}$ there exists $r$ such that for every $r_{1}$ such that $r_{1}<r$ and $r_{1} \in \operatorname{dom} f$ holds $\left|f\left(r_{1}\right)-g\right|<g_{1}$.
(114) Suppose $f$ is convergent in $+\infty$. Then $\lim _{+\infty} f=g$ if and only if for every $g_{1}$ such that $0<$ $g_{1}$ there exists $r$ such that for every $r_{1}$ such that $r<r_{1}$ and $r_{1} \in \operatorname{dom} f$ holds $\left|f\left(r_{1}\right)-g\right|<g_{1}$.
(115) If $f$ is convergent in $+\infty$, then $r f$ is convergent in $+\infty$ and $\lim _{+\infty}(r f)=r \cdot \lim _{+\infty} f$.
(116) If $f$ is convergent in $+\infty$, then $-f$ is convergent in $+\infty$ and $\lim _{+\infty}(-f)=-\lim _{+\infty} f$.
(117) Suppose $f_{1}$ is convergent in $+\infty$ and $f_{2}$ is convergent in $+\infty$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom}\left(f_{1}+f_{2}\right)$. Then $f_{1}+f_{2}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(f_{1}+f_{2}\right)=$ $\lim _{+\infty} f_{1}+\lim _{+\infty} f_{2}$.
(118) Suppose $f_{1}$ is convergent in $+\infty$ and $f_{2}$ is convergent in $+\infty$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom}\left(f_{1}-f_{2}\right)$. Then $f_{1}-f_{2}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(f_{1}-f_{2}\right)=$ $\lim _{+\infty} f_{1}-\lim _{+\infty} f_{2}$.
(119) If $f$ is convergent in $+\infty$ and $f^{-1}(\{0\})=\emptyset$ and $\lim _{+\infty} f \neq 0$, then $\frac{1}{f}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(\frac{1}{f}\right)=\left(\lim _{+\infty} f\right)^{-1}$.
(120) If $f$ is convergent in $+\infty$, then $|f|$ is convergent in $+\infty$ and $\lim _{+\infty}|f|=\left|\lim _{+\infty} f\right|$.
(121) Suppose $f$ is convergent in $+\infty$ and $\lim _{+\infty} f \neq 0$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$. Then $\frac{1}{f}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(\frac{1}{f}\right)=\left(\lim _{+\infty} f\right)^{-1}$.
(122) Suppose $f_{1}$ is convergent in $+\infty$ and $f_{2}$ is convergent in $+\infty$ and for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom}\left(f_{1} f_{2}\right)$. Then $f_{1} f_{2}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(f_{1} f_{2}\right)=$ $\lim _{+\infty} f_{1} \cdot \lim _{+\infty} f_{2}$.
(123) Suppose that
(i) $f_{1}$ is convergent in $+\infty$,
(ii) $f_{2}$ is convergent in $+\infty$,
(iii) $\lim _{+\infty} f_{2} \neq 0$, and
(iv) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom}\left(\frac{f_{1}}{f_{2}}\right)$.

Then $\frac{f_{1}}{f_{2}}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(\frac{f_{1}}{f_{2}}\right)=\frac{\lim _{+\infty} f_{1}}{\lim _{+\infty} f_{2}}$.
(124) If $f$ is convergent in $-\infty$, then $r f$ is convergent in $-\infty$ and $\lim _{-\infty}(r f)=r \cdot \lim _{-\infty} f$.

[^3](125) If $f$ is convergent in $-\infty$, then $-f$ is convergent in $-\infty$ and $\lim _{-\infty}(-f)=-\lim _{-\infty} f$.
(126) Suppose $f_{1}$ is convergent in $-\infty$ and $f_{2}$ is convergent in $-\infty$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom}\left(f_{1}+f_{2}\right)$. Then $f_{1}+f_{2}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(f_{1}+f_{2}\right)=$ $\lim _{-\infty} f_{1}+\lim _{-\infty} f_{2}$.
(127) Suppose $f_{1}$ is convergent in $-\infty$ and $f_{2}$ is convergent in $-\infty$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom}\left(f_{1}-f_{2}\right)$. Then $f_{1}-f_{2}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(f_{1}-f_{2}\right)=$ $\lim _{-\infty} f_{1}-\lim _{-\infty} f_{2}$.
(128) If $f$ is convergent in $-\infty$ and $f^{-1}(\{0\})=0$ and $\lim _{-\infty} f \neq 0$, then $\frac{1}{f}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(\frac{1}{f}\right)=\left(\lim _{-\infty} f\right)^{-1}$.
(129) If $f$ is convergent in $-\infty$, then $|f|$ is convergent in $-\infty$ and $\lim _{-\infty}|f|=\left|\lim _{-\infty} f\right|$.
(130) Suppose $f$ is convergent in $-\infty$ and $\lim _{-\infty} f \neq 0$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$. Then $\frac{1}{f}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(\frac{1}{f}\right)=\left(\lim _{-\infty} f\right)^{-1}$.
(131) Suppose $f_{1}$ is convergent in $-\infty$ and $f_{2}$ is convergent in $-\infty$ and for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom}\left(f_{1} f_{2}\right)$. Then $f_{1} f_{2}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(f_{1} f_{2}\right)=$ $\lim _{-\infty} f_{1} \cdot \lim _{-\infty} f_{2}$.
(132) Suppose that
(i) $f_{1}$ is convergent in $-\infty$,
(ii) $f_{2}$ is convergent in $-\infty$,
(iii) $\lim _{-\infty} f_{2} \neq 0$, and
(iv) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom}\left(\frac{f_{1}}{f_{2}}\right)$.

Then $\frac{f_{1}}{f_{2}}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(\frac{f_{1}}{f_{2}}\right)=\frac{\lim _{-\infty} f_{1}}{\lim _{-\infty} f_{2}}$.
(133) Suppose that
(i) $f_{1}$ is convergent in $+\infty$,
(ii) $\lim _{+\infty} f_{1}=0$,
(iii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom}\left(f_{1} f_{2}\right)$, and
(iv) there exists $r$ such that $f_{2}$ is bounded on $] r,+\infty[$.

Then $f_{1} f_{2}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(f_{1} f_{2}\right)=0$.
(134) Suppose that
(i) $f_{1}$ is convergent in $-\infty$,
(ii) $\lim _{-\infty} f_{1}=0$,
(iii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom}\left(f_{1} f_{2}\right)$, and
(iv) there exists $r$ such that $f_{2}$ is bounded on $]-\infty, r[$.

Then $f_{1} f_{2}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(f_{1} f_{2}\right)=0$.
(135) Suppose that
(i) $f_{1}$ is convergent in $+\infty$,
(ii) $f_{2}$ is convergent in $+\infty$,
(iii) $\lim _{+\infty} f_{1}=\lim _{+\infty} f_{2}$,
(iv) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$, and
(v) there exists $r$ such that $\left.\operatorname{dom} f_{1} \cap\right] r,+\infty\left[\subseteq \operatorname{dom} f_{2} \cap\right] r,+\infty[$ and $\operatorname{dom} f \cap] r,+\infty\left[\subseteq \operatorname{dom} f_{1} \cap\right.$ $] r,+\infty\left[\right.$ or $\left.\operatorname{dom} f_{2} \cap\right] r,+\infty\left[\subseteq \operatorname{dom} f_{1} \cap\right] r,+\infty[$ and $\operatorname{dom} f \cap] r,+\infty\left[\subseteq \operatorname{dom} f_{2} \cap\right] r,+\infty[$ but for every $g$ such that $g \in \operatorname{dom} f \cap] r,+\infty\left[\right.$ holds $f_{1}(g) \leq f(g)$ and $f(g) \leq f_{2}(g)$.
Then $f$ is convergent in $+\infty$ and $\lim _{+\infty} f=\lim _{+\infty} f_{1}$.
(136) Suppose that
(i) $f_{1}$ is convergent in $+\infty$,
(ii) $f_{2}$ is convergent in $+\infty$,
(iii) $\lim _{+\infty} f_{1}=\lim _{+\infty} f_{2}$, and
(iv) there exists $r$ such that $] r,+\infty\left[\subseteq \operatorname{dom} f_{1} \cap \operatorname{dom} f_{2} \cap \operatorname{dom} f\right.$ and for every $g$ such that $g \in$ $] r,+\infty\left[\right.$ holds $f_{1}(g) \leq f(g)$ and $f(g) \leq f_{2}(g)$.
Then $f$ is convergent in $+\infty$ and $\lim _{+\infty} f=\lim _{+\infty} f_{1}$.
(137) Suppose that
(i) $\quad f_{1}$ is convergent in $-\infty$,
(ii) $f_{2}$ is convergent in $-\infty$,
(iii) $\lim _{-\infty} f_{1}=\lim _{-\infty} f_{2}$,
(iv) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$, and
(v) there exists $r$ such that $\left.\operatorname{dom} f_{1} \cap\right]-\infty, r\left[\subseteq \operatorname{dom} f_{2} \cap\right]-\infty, r[$ and $\operatorname{dom} f \cap]-\infty, r\left[\subseteq \operatorname{dom} f_{1} \cap\right.$ $]-\infty, r\left[\right.$ or $\left.\operatorname{dom} f_{2} \cap\right]-\infty, r\left[\subseteq \operatorname{dom} f_{1} \cap\right]-\infty, r[$ and $\operatorname{dom} f \cap]-\infty, r\left[\subseteq \operatorname{dom} f_{2} \cap\right]-\infty, r[$ but for every $g$ such that $g \in \operatorname{dom} f \cap]-\infty, r\left[\right.$ holds $f_{1}(g) \leq f(g)$ and $f(g) \leq f_{2}(g)$.
Then $f$ is convergent in $-\infty$ and $\lim _{-\infty} f=\lim _{-\infty} f_{1}$.
(138) Suppose that
(i) $\quad f_{1}$ is convergent in $-\infty$,
(ii) $f_{2}$ is convergent in $-\infty$,
(iii) $\lim _{-\infty} f_{1}=\lim _{-\infty} f_{2}$, and
(iv) there exists $r$ such that $]-\infty, r\left[\subseteq \operatorname{dom} f_{1} \cap \operatorname{dom} f_{2} \cap \operatorname{dom} f\right.$ and for every $g$ such that $g \in$ $]-\infty, r\left[\right.$ holds $f_{1}(g) \leq f(g)$ and $f(g) \leq f_{2}(g)$.
Then $f$ is convergent in $-\infty$ and $\lim _{-\infty} f=\lim _{-\infty} f_{1}$.
(139) Suppose that
(i) $f_{1}$ is convergent in $+\infty$,
(ii) $f_{2}$ is convergent in $+\infty$, and
(iii) there exists $r$ such that $\left.\operatorname{dom} f_{1} \cap\right] r,+\infty\left[\subseteq \operatorname{dom} f_{2} \cap\right] r,+\infty[$ and for every $g$ such that $g \in$ $\left.\operatorname{dom} f_{1} \cap\right] r,+\infty\left[\right.$ holds $f_{1}(g) \leq f_{2}(g)$ or $\left.\operatorname{dom} f_{2} \cap\right] r,+\infty\left[\subseteq \operatorname{dom} f_{1} \cap\right] r,+\infty[$ and for every $g$ such that $\left.g \in \operatorname{dom} f_{2} \cap\right] r,+\infty\left[\right.$ holds $f_{1}(g) \leq f_{2}(g)$.
Then $\lim _{+\infty} f_{1} \leq \lim _{+\infty} f_{2}$.
(140) Suppose that
(i) $f_{1}$ is convergent in $-\infty$,
(ii) $f_{2}$ is convergent in $-\infty$, and
(iii) there exists $r$ such that $\left.\operatorname{dom} f_{1} \cap\right]-\infty, r\left[\subseteq \operatorname{dom} f_{2} \cap\right]-\infty, r[$ and for every $g$ such that $\left.g \in \operatorname{dom} f_{1} \cap\right]-\infty, r\left[\right.$ holds $f_{1}(g) \leq f_{2}(g)$ or $\left.\operatorname{dom} f_{2} \cap\right]-\infty, r\left[\subseteq \operatorname{dom} f_{1} \cap\right]-\infty, r[$ and for every $g$ such that $\left.g \in \operatorname{dom} f_{2} \cap\right]-\infty, r\left[\right.$ holds $f_{1}(g) \leq f_{2}(g)$.
Then $\lim _{-\infty} f_{1} \leq \lim _{-\infty} f_{2}$.
(141) Suppose that
(i) $f$ is divergent in $+\infty$ to $+\infty$ and divergent in $+\infty$ to $-\infty$, and
(ii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$. Then $\frac{1}{f}$ is convergent in $+\infty$ and $\lim _{+\infty}\left(\frac{1}{f}\right)=0$.
(142) Suppose that
(i) $f$ is divergent in $-\infty$ to $+\infty$ and divergent in $-\infty$ to $-\infty$, and
(ii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$.

Then $\frac{1}{f}$ is convergent in $-\infty$ and $\lim _{-\infty}\left(\frac{1}{f}\right)=0$.
(143) Suppose that
(i) $f$ is convergent in $+\infty$,
(ii) $\lim _{+\infty} f=0$,
(iii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$, and
(iv) there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap] r,+\infty[$ holds $0 \leq f(g)$. Then $\frac{1}{f}$ is divergent in $+\infty$ to $+\infty$.
(144) Suppose that
(i) $f$ is convergent in $+\infty$,
(ii) $\lim _{+\infty} f=0$,
(iii) for every $r$ there exists $g$ such that $r<g$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$, and
(iv) there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap] r,+\infty[$ holds $f(g) \leq 0$.

Then $\frac{1}{f}$ is divergent in $+\infty$ to $-\infty$.
(145) Suppose that
(i) $f$ is convergent in $-\infty$,
(ii) $\lim _{-\infty} f=0$,
(iii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$, and
(iv) there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap]-\infty, r[$ holds $0 \leq f(g)$.

Then $\frac{1}{f}$ is divergent in $-\infty$ to $+\infty$.
(146) Suppose that
(i) $f$ is convergent in $-\infty$,
(ii) $\lim _{-\infty} f=0$,
(iii) for every $r$ there exists $g$ such that $g<r$ and $g \in \operatorname{dom} f$ and $f(g) \neq 0$, and
(iv) there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap]-\infty, r[$ holds $f(g) \leq 0$.

Then $\frac{1}{f}$ is divergent in $-\infty$ to $-\infty$.
(147) Suppose $f$ is convergent in $+\infty$ and $\lim _{+\infty} f=0$ and there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap] r,+\infty\left[\right.$ holds $0<f(g)$. Then $\frac{1}{f}$ is divergent in $+\infty$ to $+\infty$.
(148) Suppose $f$ is convergent in $+\infty$ and $\lim _{+\infty} f=0$ and there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap] r,+\infty\left[\right.$ holds $f(g)<0$. Then $\frac{1}{f}$ is divergent in $+\infty$ to $-\infty$.
(149) Suppose $f$ is convergent in $-\infty$ and $\lim _{-\infty} f=0$ and there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap]-\infty, r\left[\right.$ holds $0<f(g)$. Then $\frac{1}{f}$ is divergent in $-\infty$ to $+\infty$.
(150) Suppose $f$ is convergent in $-\infty$ and $\lim _{-\infty} f=0$ and there exists $r$ such that for every $g$ such that $g \in \operatorname{dom} f \cap]-\infty, r\left[\right.$ holds $f(g)<0$. Then $\frac{1}{f}$ is divergent in $-\infty$ to $-\infty$.
