## **Banach Space of Absolute Summable Real Sequences**

Yasumasa Suzuki 2-14-18 Take, Yokosuka-shi Kanagawa, Japan Noboru Endou Gifu National College of Technology

Yasunari Shidama Shinshu University Nagano

**Summary.** A continuation of [5]. As the example of real norm spaces, we introduce the arithmetic addition and multiplication in the set of absolute summable real sequences and introduce the norm also. This set has the structure of the Banach space.

MML Identifier: RSSPACE3.

The articles [13], [17], [4], [1], [14], [7], [2], [3], [18], [16], [10], [15], [11], [9], [8], [12], and [6] provide the notation and terminology for this paper.

1. L1\_SPACE: THE SPACE OF ABSOLUTE SUMMABLE REAL SEQUENCES

The subset the set of 11-real sequences of the linear space of real sequences is defined by the condition (Def. 1).

(Def. 1) Let x be a set. Then  $x \in$  the set of 11-real sequences if and only if  $x \in$  the set of real sequences and  $id_{seq}(x)$  is absolutely summable.

One can verify that the set of 11-real sequences is non empty. The following two propositions are true:

- (1) The set of 11-real sequences is linearly closed.
- (2) (the set of 11-real sequences, Zero\_(the set of 11-real sequences, the linear space of real sequences), Add\_(the set of 11-real sequences, the linear space of real sequences), Mult\_(the set of 11-real sequences, the linear space of real sequences)) is a subspace of the linear space of real sequences.

Let us observe that (the set of 11-real sequences, Zero\_(the set of 11-real sequences, the linear space of real sequences), Add\_(the set of 11-real sequences, the linear space of real sequences), Mult\_(the set of 11-real sequences, the linear space of real sequences)) is Abelian, add-associative, right zeroed, right complementable, and real linear space-like.

Next we state the proposition

(3) (the set of 11-real sequences, Zero\_(the set of 11-real sequences, the linear space of real sequences), Add\_(the set of 11-real sequences, the linear space of real sequences), Mult\_(the set of 11-real sequences, the linear space of real sequences)) is a real linear space.

The function norm<sub>seq</sub> from the set of 11-real sequences into  $\mathbb{R}$  is defined as follows:

(Def. 2) For every set x such that  $x \in$  the set of 11-real sequences holds  $\operatorname{norm}_{seq}(x) = \sum |\operatorname{id}_{seq}(x)|$ .

Let *X* be a non empty set, let *Z* be an element of *X*, let *A* be a binary operation on *X*, let *M* be a function from  $[:\mathbb{R}, X:]$  into *X*, and let *N* be a function from *X* into  $\mathbb{R}$ . Observe that  $\langle X, Z, A, M, N \rangle$  is non empty.

One can prove the following four propositions:

- (4) Let *l* be a normed structure. Suppose (the carrier of *l*, the zero of *l*, the addition of *l*, the external multiplication of *l*) is a real linear space. Then *l* is a real linear space.
- (5) Let  $r_1$  be a sequence of real numbers. Suppose that for every natural number *n* holds  $r_1(n) = 0$ . Then  $r_1$  is absolutely summable and  $\sum |r_1| = 0$ .
- (6) Let  $r_1$  be a sequence of real numbers. Suppose  $r_1$  is absolutely summable and  $\sum |r_1| = 0$ . Let *n* be a natural number. Then  $r_1(n) = 0$ .
- (7) (the set of 11-real sequences, Zero\_(the set of 11-real sequences, the linear space of real sequences), Add\_(the set of 11-real sequences, the linear space of real sequences), Mult\_(the set of 11-real sequences, the linear space of real sequences), norm<sub>seq</sub>) is a real linear space.

The non empty normed structure 11-Space is defined by the condition (Def. 3).

(Def. 3) 11-Space =  $\langle$  the set of 11-real sequences, Zero\_(the set of 11-real sequences, the linear space of real sequences), Add\_(the set of 11-real sequences, the linear space of real sequences), Mult\_(the set of 11-real sequences, the linear space of real sequences), norm<sub>seq</sub> $\rangle$ .

## 2. L1\_SPACE IS BANACH

We now state two propositions:

- (8) The carrier of 11-Space = the set of 11-real sequences and for every set *x* holds *x* is an element of 11-Space iff *x* is a sequence of real numbers and  $id_{seq}(x)$  is absolutely summable and for every set *x* holds *x* is a vector of 11-Space iff *x* is a sequence of real numbers and  $id_{seq}(x)$  is absolutely summable and  $0_{11-Space}$  = Zeroseq and for every vector *u* of 11-Space holds  $u = id_{seq}(u)$  and for all vectors *u*, *v* of 11-Space holds  $u + v = id_{seq}(u) + id_{seq}(v)$  and for every vector *u* of 11-Space holds  $r \cdot u = r id_{seq}(u)$  and for every vector *u* of 11-Space holds  $-u = -id_{seq}(u)$  and  $id_{seq}(-u) = -id_{seq}(u)$  and for all vectors *u*, *v* of 11-Space holds  $u v = id_{seq}(u) id_{seq}(v)$  and for every vector *v* of 11-Space holds  $u v = id_{seq}(u) id_{seq}(v)$  and for every vector *v* of 11-Space holds  $id_{seq}(v)$  is absolutely summable and for every vector *v* of 11-Space holds  $|v|| = \sum |id_{seq}(v)|$ .
- (9) Let x, y be points of 11-Space and a be a real number. Then ||x|| = 0 iff  $x = 0_{11-\text{Space}}$  and  $0 \le ||x||$  and  $||x+y|| \le ||x|| + ||y||$  and  $||a \cdot x|| = |a| \cdot ||x||$ .

Let us note that 11-Space is real normed space-like, real linear space-like, Abelian, add-associative, right zeroed, and right complementable.

Let X be a non empty normed structure and let x, y be points of X. The functor  $\rho(x, y)$  yielding a real number is defined by:

(Def. 4)  $\rho(x, y) = ||x - y||.$ 

Let  $N_1$  be a non empty normed structure and let  $s_1$  be a sequence of  $N_1$ . We say that  $s_1$  is CCauchy if and only if the condition (Def. 5) is satisfied.

(Def. 5) Let  $r_2$  be a real number. Suppose  $r_2 > 0$ . Then there exists a natural number  $k_1$  such that for all natural numbers  $n_1, m_1$  if  $n_1 \ge k_1$  and  $m_1 \ge k_1$ , then  $\rho(s_1(n_1), s_1(m_1)) < r_2$ .

We introduce  $s_1$  is Cauchy sequence by norm as a synonym of  $s_1$  is CCauchy. In the sequel  $N_1$  denotes a non empty real normed space and  $s_2$  denotes a sequence of  $N_1$ . Next we state two propositions:

- (10)  $s_2$  is Cauchy sequence by norm if and only if for every real number r such that r > 0 there exists a natural number k such that for all natural numbers n, m such that  $n \ge k$  and  $m \ge k$  holds  $||s_2(n) s_2(m)|| < r$ .
- (11) For every sequence  $v_1$  of 11-Space such that  $v_1$  is Cauchy sequence by norm holds  $v_1$  is convergent.
