# Bounding Boxes for Special Sequences in $\mathcal{E}^{2}$ 

Yatsuka Nakamura<br>Shinshu University<br>Nagano

Adam Grabowski ${ }^{1}$<br>University of Białystok

Summary. This is the continuation of the proof of the Jordan Theorem according to [18].

MML Identifier: JORDAN5D.

The articles [16], [8], [6], [2], [21], [20], [5], [3], [12], [13], [15], [9], [1], [14], [17], [4], [23], [11], [10], [22], [19], and [7] provide the terminology and notation for this paper.

## 1. Preliminaries

For simplicity, we use the following convention: $p, q$ denote points of $\mathcal{E}_{\mathrm{T}}^{2}$, $s, r$ denote real numbers, $h$ denotes a non constant standard special circular sequence, $g$ denotes a finite sequence of elements of $\mathcal{E}_{\mathrm{T}}^{2}, f$ denotes a non empty finite sequence of elements of $\mathcal{E}_{\mathrm{T}}^{2}$, and $I, i_{1}, i, j, k$ denote natural numbers.

We now state a number of propositions:
(1) Let $B$ be a subset of $\mathbb{R}$. Suppose there exists a real number $r_{1}$ such that $r_{1} \in B$ and $B$ is lower bounded and for every $r$ such that $r \in B$ holds $s \leqslant r$. Then $s \leqslant \inf B$.
(2) Let $B$ be a subset of $\mathbb{R}$. Suppose there exists a real number $r_{1}$ such that $r_{1} \in B$ and $B$ is upper bounded and for every $r$ such that $r \in B$ holds $s \geqslant r$. Then $s \geqslant \sup B$.
(3) $\pi_{\text {len } h} h \in \mathcal{L}\left(h, \operatorname{len} h-^{\prime} 1\right)$.

[^0](4) If $3 \leqslant i$, then $i \bmod \left(i-^{\prime} 1\right)=1$.
(5) If $p \in \operatorname{rng} h$, then there exists a natural number $i$ such that $1 \leqslant i$ and $i+1 \leqslant \operatorname{len} h$ and $h(i)=p$.
(6) For every finite sequence $g$ of elements of $\mathbb{R}$ such that $r \in \operatorname{rng} g$ holds $(\operatorname{Inc}(g))(1) \leqslant r$ and $r \leqslant(\operatorname{Inc}(g))(\operatorname{len} \operatorname{Inc}(g))$.
(7) Suppose $1 \leqslant i$ and $i \leqslant \operatorname{len} h$ and $1 \leqslant I$ and $I \leqslant$ width the Goboard of $h$. Then $\left((\text { the Go-board of } h)_{1, I}\right)_{\mathbf{1}} \leqslant\left(\pi_{i} h\right)_{\mathbf{1}}$ and $\left(\pi_{i} h\right)_{\mathbf{1}} \leqslant$ ( (the Go-board of $\left.h)_{\text {len the Go-board of } h, I}\right)_{\mathbf{1}}$.
(8) Suppose $1 \leqslant i$ and $i \leqslant \operatorname{len} h$ and $1 \leqslant I$ and $I \leqslant$ len the Goboard of $h$. Then $\left((\text { the Go-board of } h)_{I, 1}\right)_{\mathbf{2}} \leqslant\left(\pi_{i} h\right)_{\mathbf{2}}$ and $\left(\pi_{i} h\right)_{\mathbf{2}} \leqslant$ ((the Go-board of $h)_{I, \text { width the Go-board of } h)_{2}}$.
(9) Suppose $1 \leqslant i$ and $i \leqslant$ len the Go-board of $f$. Then there exist $k, j$ such that $k \in \operatorname{dom} f$ and $\langle i, j\rangle \in$ the indices of the Go-board of $f$ and $\pi_{k} f=(\text { the Go-board of } f)_{i, j}$.
(10) Suppose $1 \leqslant j$ and $j \leqslant$ width the Go-board of $f$. Then there exist $k, i$ such that $k \in \operatorname{dom} f$ and $\langle i, j\rangle \in$ the indices of the Go-board of $f$ and $\pi_{k} f=(\text { the Go-board of } f)_{i, j}$.
(11) Suppose $1 \leqslant i$ and $i \leqslant$ len the Go-board of $f$ and $1 \leqslant j$ and $j \leqslant$ width the Go-board of $f$. Then there exists $k$ such that $k \in \operatorname{dom} f$ and $\langle i, j\rangle \in$ the indices of the Go-board of $f$ and $\left(\pi_{k} f\right)_{\mathbf{1}}=\left((\text { the Go-board of } f)_{i, j}\right)_{\mathbf{1}}$.
(12) Suppose $1 \leqslant i$ and $i \leqslant$ len the Go-board of $f$ and $1 \leqslant j$ and $j \leqslant$ width the Go-board of $f$. Then there exists $k$ such that $k \in \operatorname{dom} f$ and $\langle i, j\rangle \in$ the indices of the Go-board of $f$ and $\left(\pi_{k} f\right)_{\mathbf{2}}=\left((\text { the Go-board of } f)_{i, j}\right)_{\mathbf{2}}$.

## 2. Extrema of Projections

One can prove the following propositions:
(13) If $1 \leqslant \underset{\sim}{i}$ and $i \leqslant$ len $h$, then S-bound $\widetilde{\mathcal{L}}(h) \leqslant\left(\pi_{i} h\right)_{\mathbf{2}}$ and $\left(\pi_{i} h\right)_{\mathbf{2}} \leqslant$ N-bound $\widetilde{\mathcal{L}}(h)$.
(14) If $1 \leqslant \underset{\sim}{i}$ and $i \leqslant$ len $h$, then W-bound $\widetilde{\mathcal{L}}(h) \leqslant\left(\pi_{i} h\right)_{\mathbf{1}}$ and $\left(\pi_{i} h\right)_{\mathbf{1}} \leqslant$ E-bound $\widetilde{\mathcal{L}}(h)$.
(15) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{2}: q_{1}=\right.$ W-bound $\widetilde{\mathcal{L}}(h) \wedge$ $q \in \widetilde{\mathcal{L}}(h)\}$ holds $X=(\operatorname{proj} 2 \upharpoonright \text { W-most } \widetilde{\mathcal{L}}(h))^{\circ}$ (the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright \mathrm{W}-$ most $\left.\widetilde{\mathcal{L}}(h)\right)$.
(16) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{\mathbf{2}}: q_{\mathbf{1}}=\right.$ E-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds $X=(\text { proj} 2 \upharpoonright \text { E-most } \widetilde{\mathcal{L}}(h))^{\circ}\left(\right.$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright$ E-most $\left.\widetilde{\mathcal{L}}(h)\right)$.
(17) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{1}: q_{2}=\mathrm{N}\right.$-bound $\widetilde{\mathcal{L}}(h) \wedge$ $q \in \widetilde{\mathcal{L}}(h)\}$ holds $X=(\text { proj1 } \upharpoonright \operatorname{N} \text {-most } \widetilde{\mathcal{L}}(h))^{\circ}$ (the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright \mathrm{N}$-most $\left.\widetilde{\mathcal{L}}(h)\right)$.
(18) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{1}: q_{\mathbf{2}}=\right.$ S-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds $X=(\text { proj1 } \upharpoonright \text { S-most } \widetilde{\mathcal{L}}(h))^{\circ}\left(\right.$ the carrier of $\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright$ S-most $\left.\widetilde{\mathcal{L}}(h)\right)$.
(19) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{1}: q \in \widetilde{\mathcal{L}}(g)\right\}$ holds $X=$ (proj1 $\upharpoonright \widetilde{\mathcal{L}}(g))^{\circ}\left(\right.$ the carrier of $\left.\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright \widetilde{\mathcal{L}}(g)\right)$.
(20) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{2}: q \in \widetilde{\mathcal{L}}(g)\right\}$ holds $X=$ (proj2 $\upharpoonright \widetilde{\mathcal{L}}(g))^{\circ}$ (the carrier of $\left.\left(\mathcal{E}_{\mathrm{T}}^{2}\right) \upharpoonright \widetilde{\mathcal{L}}(g)\right)$.
 $\widetilde{\mathcal{L}}(h)\}$ holds $\inf X=\inf (\operatorname{proj} 2 \upharpoonright \mathrm{~W}$-most $\widetilde{\mathcal{L}}(h))$.
(22) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{\mathbf{2}}: q_{\mathbf{1}}=\mathrm{W}\right.$-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds sup $X=\sup (\operatorname{proj} 2 \upharpoonright \mathrm{~W}$-most $\widetilde{\mathcal{L}}(h))$.
(23) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{\mathbf{2}}: q_{\mathbf{1}}=\right.$ E-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds $\inf X=\inf ($ proj $2 \upharpoonright$ E-most $\widetilde{\mathcal{L}}(h))$.
(24) $\widetilde{\sim}^{\text {For every subset } X}$ of $\mathbb{R}$ such that $X=\left\{q_{\mathbf{2}}: q_{\mathbf{1}}=\right.$ E-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds $\sup X=\sup (\operatorname{proj} 2 \upharpoonright \mathrm{E}-$ most $\widetilde{\mathcal{L}}(h))$.
(25) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{\mathbf{1}}: q \in \widetilde{\mathcal{L}}(g)\right\}$ holds inf $X=$ $\inf (\operatorname{proj} 1 \upharpoonright \widetilde{\mathcal{L}}(g))$.
(26) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{1}: q_{\mathbf{2}}=\right.$ S-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds $\inf X=\inf ($ proj1 $\upharpoonright$ S-most $\widetilde{\mathcal{L}}(h))$.
(27) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{1}: q_{\mathbf{2}}=\right.$ S-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds $\sup X=\sup ($ proj1 $\upharpoonright$ S-most $\widetilde{\mathcal{L}}(h))$.
(28) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{1}: q_{\mathbf{2}}=\mathrm{N}\right.$-bound $\widetilde{\mathcal{L}}(h) \wedge q \in$ $\widetilde{\mathcal{L}}(h)\}$ holds $\inf X=\inf ($ proj1 $\upharpoonright \mathrm{N}$-most $\widetilde{\mathcal{L}}(h))$.
 $\widetilde{\mathcal{L}}(h)\}$ holds $\sup X=\sup ($ proj1 $\upharpoonright \mathrm{N}$-most $\widetilde{\mathcal{L}}(h))$.
(30) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{\mathbf{2}}: q \in \widetilde{\mathcal{L}}(g)\right\}$ holds inf $X=$ $\inf (\operatorname{proj} 2 \upharpoonright \widetilde{\mathcal{L}}(g))$.
(31) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{1}: q \in \widetilde{\mathcal{L}}(g)\right\}$ holds $\sup X=$ $\sup (\operatorname{proj} 1 \upharpoonright \widetilde{\mathcal{L}}(g))$.
(32) For every subset $X$ of $\mathbb{R}$ such that $X=\left\{q_{\mathbf{2}}: q \in \widetilde{\mathcal{L}}(g)\right\}$ holds $\sup X=$ $\sup (\operatorname{proj} 2 \upharpoonright \widetilde{\mathcal{L}}(g))$.
(33) If $p \in \widetilde{\mathcal{L}}(h)$ and $1 \leqslant I$ and $I \leqslant$ width the Go-board of $h$, then $\left((\text { the Go-board of } h)_{1, I}\right)_{\mathbf{1}} \leqslant p_{\mathbf{1}}$.
(34) If $p \in \widetilde{\mathcal{L}}(h)$ and $1 \leqslant I$ and $I \leqslant$ width the Go-board of $h$, then $p_{\mathbf{1}} \leqslant$ ( (the Go-board of $\left.h)_{\text {len the Go-board of } h, I}\right)_{\mathbf{1}}$.
(35) If $p \in \widetilde{\mathcal{L}}(h)$ and $1 \leqslant I$ and $I \leqslant$ len the Go-board of $h$, then $\left((\text { the Go-board of } h)_{I, 1}\right)_{\mathbf{2}} \leqslant p_{\mathbf{2}}$.
(36) If $p \in \widetilde{\mathcal{L}}(h)$ and $1 \leqslant I$ and $I \leqslant$ len the Go-board of $h$, then $p_{\mathbf{2}} \leqslant$ $\left((\text { the Go-board of } h)_{I, \text { width the Go-board of } h)_{\mathbf{2}} .}\right.$.
(37) Suppose $1 \leqslant i$ and $i \leqslant$ len the Go-board of $h$ and $1 \leqslant j$ and $j \leqslant$ width the Go-board of $h$. Then there exists $q$ such that $q_{\mathbf{1}}=$ $\left((\text { the Go-board of } h)_{i, j}\right)_{1}$ and $q \in \widetilde{\mathcal{L}}(h)$.
(38) Suppose $1 \leqslant i$ and $i \leqslant$ len the Go-board of $h$ and $1 \leqslant j$ and $j \leqslant$ width the Go-board of $h$. Then there exists $q$ such that $q_{2}=$ $\left((\text { the Go-board of } h)_{i, j}\right)_{2}$ and $q \in \widetilde{\mathcal{L}}(h)$.
(39) W-bound $\widetilde{\mathcal{L}}(h)=\left((\text { the Go-board of } h)_{1,1}\right)_{\mathbf{1}}$.
(40) S-bound $\widetilde{\mathcal{L}}(h)=\left((\text { the Go-board of } h)_{1,1}\right)_{\mathbf{2}}$.
(41) E-bound $\widetilde{\mathcal{L}}(h)=\left((\text { the Go-board of } h)_{\text {len the Go-board of } h, 1}\right)_{\mathbf{1}}$.

(43) Let $Y$ be a non empty finite subset of $\mathbb{N}$. Suppose that
(i) $1 \leqslant i$,
(ii) $i \leqslant \operatorname{len} f$,
(iii) $1 \leqslant I$,
(iv) $\quad I \leqslant$ len the Go-board of $f$,
(v) $Y=\left\{j:\langle I, j\rangle \in\right.$ the indices of the Go-board of $f \wedge \bigvee_{k}(k \in$ $\left.\left.\operatorname{dom} f \wedge \pi_{k} f=(\text { the Go-board of } f)_{I, j}\right)\right\}$,
(vi) $\quad\left(\pi_{i} f\right)_{\mathbf{1}}=\left((\text { the Go-board of } f)_{I, 1}\right)_{\mathbf{1}}$, and
(vii) $\quad i_{1}=\min Y$.

Then $\left((\text { the Go-board of } f)_{I, i_{1}}\right)_{\mathbf{2}} \leqslant\left(\pi_{i} f\right)_{\mathbf{2}}$.
(44) Let $Y$ be a non empty finite subset of $\mathbb{N}$. Suppose that
(i) $1 \leqslant i$,
(ii) $i \leqslant \operatorname{len} h$,
(iii) $1 \leqslant I$,
(iv) $I \leqslant$ width the Go-board of $h$,
(v) $\quad Y=\left\{j:\langle j, I\rangle \in\right.$ the indices of the Go-board of $h \wedge \bigvee_{k}(k \in$ $\left.\left.\operatorname{dom} h \wedge \pi_{k} h=(\text { the Go-board of } h)_{j, I}\right)\right\}$,
(vi) $\quad\left(\pi_{i} h\right)_{\mathbf{2}}=\left((\text { the Go-board of } h)_{1, I}\right)_{\mathbf{2}}$, and
(vii) $\quad i_{1}=\min Y$.

Then $\left((\text { the Go-board of } h)_{i_{1}, I}\right)_{\mathbf{1}} \leqslant\left(\pi_{i} h\right)_{\mathbf{1}}$.
(45) Let $Y$ be a non empty finite subset of $\mathbb{N}$. Suppose that
(i) $1 \leqslant i$,
(ii) $\quad i \leqslant \operatorname{len} h$,
(iii) $1 \leqslant I$,
(iv) $\quad I \leqslant$ width the Go-board of $h$,
(v) $Y=\left\{j:\langle j, I\rangle \in\right.$ the indices of the Go-board of $h \wedge \bigvee_{k}(k \in$ $\left.\left.\operatorname{dom} h \wedge \pi_{k} h=(\text { the Go-board of } h)_{j, I}\right)\right\}$,
(vi) $\quad\left(\pi_{i} h\right)_{\mathbf{2}}=\left((\text { the Go-board of } h)_{1, I}\right)_{\mathbf{2}}$, and
(vii) $\quad i_{1}=\max Y$.

Then $\left((\text { the Go-board of } h)_{i_{1}, I}\right)_{\mathbf{1}} \geqslant\left(\pi_{i} h\right)_{\mathbf{1}}$.
(46) Let $Y$ be a non empty finite subset of $\mathbb{N}$. Suppose that
(i) $1 \leqslant i$,
(ii) $i \leqslant \operatorname{len} f$,
(iii) $1 \leqslant I$,
(iv) $\quad I \leqslant$ len the Go-board of $f$,
(v) $Y=\left\{j:\langle I, j\rangle \in\right.$ the indices of the Go-board of $f \wedge \bigvee_{k}(k \in$ $\left.\left.\operatorname{dom} f \wedge \pi_{k} f=(\text { the Go-board of } f)_{I, j}\right)\right\}$,
(vi) $\quad\left(\pi_{i} f\right)_{\mathbf{1}}=\left((\text { the Go-board of } f)_{I, 1}\right)_{\mathbf{1}}$, and
(vii) $\quad i_{1}=\max Y$.

Then ((the Go-board of $\left.f)_{I, i_{1}}\right)_{\mathbf{2}} \geqslant\left(\pi_{i} f\right)_{\mathbf{2}}$.

## 3. Coordinates of the Special Circular Sequences Bounding Boxes

Let $g$ be a non constant standard special circular sequence. The functor isw $g$ yields a natural number and is defined as follows:
(Def. 1) $\left\langle 1\right.$, i $\left._{\text {SW }} g\right\rangle \in$ the indices of the Go-board of $g$ and (the Go-board of $g)_{1, \text { isw }^{2}} g=\mathrm{W}-\min \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{i}_{\mathrm{NW}} g$ yields a natural number and is defined by:
(Def. 2) $\left\langle 1, \mathrm{i}_{\mathrm{NW}} g\right\rangle \in$ the indices of the Go-board of $g$ and (the Go-board of $g)_{1, \mathrm{i}_{\mathrm{NW}}} g=\mathrm{W}-\max \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{i}_{\mathrm{SE}} g$ yielding a natural number is defined by the conditions (Def. 3).
(Def. 3)(i) 〈len the Go-board of $\left.g, \mathrm{i}_{\mathrm{SE}} g\right\rangle \in$ the indices of the Go-board of $g$, and

The functor $\mathrm{i}_{\mathrm{NE}} g$ yielding a natural number is defined by the conditions (Def. 4).
(Def. 4)(i) $\quad$ len the Go-board of $\left.g, \mathrm{i}_{\mathrm{NE}} g\right\rangle \in$ the indices of the Go-board of $g$, and

The functor $\mathrm{i}_{\mathrm{WS}} g$ yields a natural number and is defined by:
(Def. 5) $\left\langle\mathrm{i}_{\mathrm{WS}} g, 1\right\rangle \in$ the indices of the Go-board of $g$ and (the Go-board of $g)_{\mathrm{i}_{\mathrm{WS}} g, 1}=\mathrm{S}-\min \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{i}_{\mathrm{ES}} g$ yields a natural number and is defined by:
(Def. 6) $\left\langle\mathrm{i}_{\mathrm{ES}} g, 1\right\rangle \in$ the indices of the Go-board of $g$ and (the Go-board of $g)_{\mathrm{i}_{\text {ES }} g, 1}=\mathrm{S}-\max \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{i}_{\mathrm{WN}} g$ yields a natural number and is defined by the conditions (Def. 7).
(Def. 7)(i) $\quad\left\langle\mathrm{i}_{\text {WN }} g\right.$, width the Go-board of $\left.g\right\rangle \in$ the indices of the Go-board of $g$, and
(ii) (the Go-board of $g)_{\mathrm{i}_{\text {WN }}} g$, width the Go-board of $g=\mathrm{N}$-min $\widetilde{\mathcal{L}}(g)$.

The functor $\mathrm{i}_{\mathrm{EN}} g$ yields a natural number and is defined by the conditions (Def. 8).
(Def. 8)(i) $\left\langle\mathrm{i}_{\text {EN }} g\right.$, width the Go-board of $\left.g\right\rangle \in$ the indices of the Go-board of $g$, and
(ii) (the Go-board of $g)_{\text {ien }} g$,width the Go-board of $g=\mathrm{N}-\max \widetilde{\mathcal{L}}(g)$.

Next we state two propositions:
(47)(i) $1 \leqslant \mathrm{i}_{\mathrm{WN}} h$,
(ii) $\mathrm{i}_{\mathrm{WN}} h \leqslant$ len the Go-board of $h$,
(iii) $1 \leqslant \mathrm{i}_{\mathrm{EN}} h$,
(iv) $\mathrm{i}_{\mathrm{EN}} h \leqslant$ len the Go-board of $h$,
(v) $1 \leqslant \mathrm{i}_{\mathrm{WS}} h$,
(vi) $\mathrm{i}_{\mathrm{WS}} h \leqslant$ len the Go-board of $h$,
(vii) $1 \leqslant \mathrm{i}_{\mathrm{ES}} h$, and
(viii) $\quad \mathrm{i}_{\mathrm{ES}} h \leqslant$ len the Go-board of $h$.
(48)(i) $1 \leqslant \mathrm{i}_{\mathrm{NE}} h$,
(ii) $\mathrm{i}_{\mathrm{NE}} h \leqslant$ width the Go-board of $h$,
(iii) $1 \leqslant \mathrm{i}_{\text {SE }} h$,
(iv) $i_{\text {SE }} h \leqslant$ width the Go-board of $h$,
(v) $1 \leqslant \mathrm{i}_{\mathrm{NW}} h$,
(vi) $\mathrm{i}_{\mathrm{NW}} h \leqslant$ width the Go-board of $h$,
(vii) $1 \leqslant$ isw $_{\text {sw }} h$, and
(viii) $\quad$ isw $h \leqslant$ width the Go-board of $h$.

Let $g$ be a non constant standard special circular sequence. The functor $\mathrm{n}_{\mathrm{SW}} g$ yields a natural number and is defined as follows:
(Def. 9) $\quad 1 \leqslant \mathrm{n}_{\mathrm{SW}} g$ and $\mathrm{n}_{\mathrm{SW}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{SW}} g\right)=\mathrm{W}-\min \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{n}_{\mathrm{NW}} g$ yielding a natural number is defined as follows:
(Def. 10) $\quad 1 \leqslant \mathrm{n}_{\mathrm{NW}} g$ and $\mathrm{n}_{\mathrm{NW}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{NW}} g\right)=\mathrm{W}-\max \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{n}_{\mathrm{SE}} g$ yielding a natural number is defined by:
(Def. 11) $1 \leqslant \mathrm{n}_{\mathrm{SE}} g$ and $\mathrm{n}_{\mathrm{SE}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{SE}} g\right)=\mathrm{E}-\min \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{n}_{\mathrm{NE}} g$ yielding a natural number is defined by:
(Def. 12) $1 \leqslant \mathrm{n}_{\mathrm{NE}} g$ and $\mathrm{n}_{\mathrm{NE}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{NE}} g\right)=\mathrm{E}-\max \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{n}_{\mathrm{WS}} g$ yielding a natural number is defined by:
(Def. 13) $1 \leqslant \mathrm{n}_{\mathrm{WS}} g$ and $\mathrm{n}_{\mathrm{WS}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{WS}} g\right)=$ S-min $\widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{n}_{\mathrm{ES}} g$ yields a natural number and is defined as follows:
(Def. 14) $1 \leqslant \mathrm{n}_{\mathrm{ES}} g$ and $\mathrm{n}_{\mathrm{ES}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{ES}} g\right)=\mathrm{S}-\max \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{n}_{\mathrm{WN}} g$ yielding a natural number is defined by:
(Def. 15) $\quad 1 \leqslant \mathrm{n}_{\mathrm{WN}} g$ and $\mathrm{n}_{\mathrm{WN}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{WN}} g\right)=\mathrm{N}-\min \widetilde{\mathcal{L}}(g)$.
The functor $\mathrm{n}_{\mathrm{EN}} g$ yielding a natural number is defined by:
(Def. 16) $1 \leqslant \mathrm{n}_{\mathrm{EN}} g$ and $\mathrm{n}_{\mathrm{EN}} g+1 \leqslant \operatorname{len} g$ and $g\left(\mathrm{n}_{\mathrm{EN}} g\right)=\mathrm{N}-\max \widetilde{\mathcal{L}}(g)$.

Next we state four propositions:

$$
\begin{align*}
& \mathrm{n}_{\mathrm{WN}} h \neq \mathrm{n}_{\mathrm{WS}} h .  \tag{49}\\
& \mathrm{n}_{\mathrm{SW}} h \neq \mathrm{n}_{\mathrm{SE}} h . \\
& \mathrm{n}_{\mathrm{EN}} h \neq \mathrm{n}_{\mathrm{ES}} h . \\
& \mathrm{n}_{\mathrm{NW}} h \neq \mathrm{n}_{\mathrm{NE}} h .
\end{align*}
$$
